

CS201 Data Structures - Course Syllabus

CS201 Data Structures is a four-credit core course offered in the third semester. The course introduces linear structures including arrays, linked lists, stacks, and queues, followed by trees, hash tables, and elementary graph algorithms.

Assessment for CS201 consists of two midterm tests worth 20 percent each, five programming assignments worth 20 percent in total, and a final examination worth 40 percent. The final examination is a closed-book written paper lasting three hours.

The prerequisite for CS201 is CS101 Introduction to Programming. Students who have not passed CS101 must obtain consent from the course instructor before registering.

The recommended textbook is 'Data Structures and Algorithm Analysis' by Mark Allen Weiss. Lecture notes are published weekly on the course portal.
